- Cemeteries

## Termite Pest Control Services & Soil Treatment

S L F Holdings offers effective termite control treatment and eradication solutions in Mpumalanga, Limpopo, Gauteng Free State and Kwa-ZuluNatal. With 6 years of experience and effectively handling countless projects, we make sure that your requirements are being fulfilled with utmost care for pre-and post-construction.

We are registered PCOs (Pest Control Operators) with the Department of Agriculture with a highly skilled and qualified team to complete the project by following the optimum environment safety standard, we guarantee our services.

We Offer Full Termite Pest Treatment Solutions:

- Soil Treatment
- Barrier Treatment
- Subterranean Treatment

As requirements vary from person to person, we make sure that our services fulfil your needs.

Our pre- and post-construction control methods are a SABS approved method of control and carries a 5 year guarantee and 10 year guarantee respectively.

- **Pre-Construction:** Our pre-construction service is a very effective solution and help since it keep termites away since day one. Our termite control treatment is applied prior to the construction in order to prevent termites. The pre-construction service becomes a feasible choice since it offers a long-term solution.
- **Post-Construction:** We comprehend the plight of customers who somehow missed applying termiticide prior to the construction; therefore our post-construction is definitely the answer. We offer you a desirable result even in the most challenging scenarios by applying chemicals beneath the foundation.

With 6 years of experience we strive to offer the best solution. Our comprehensive treatment will guarantee results.

## Treatment Process and the Dangers of having Termites

Termiticide is generally being applied to the soil or underneath the foundation in order to prevent termites and other pests. Since termites have the potential to destroy the entire construction, most of the buildings these days are being treated against termites.

Termites are regarded as destructive structural pests that devour a huge amount of wood and materials used in the construction of various structures.

By the time termites are detected, it's probably already too late. Termite infestations are not easy to spot and they can do an incredible amount of damage to a structure.

The most common termites found is the subterranean and harvester termite. A subterranean termite colony can have up to 2 million termites.

The damage termites does can devalue a home by up to 25%! Therefore, as soon as these are detected action must be taken.

A 5-year guarantee is provided on soil poisoning and 10-year guarantee on structural termite control for both industrial and residential areas.

With structural termite problems we do a **FREE SITE INSPECTION** helping us to establish the best possible control method.

If you have any questions or unsure about your problem please feel free to contact us!

**Roads & Railways**

- Servitudes
- Edges
- Surface Cracks

## Control of Alien Invasive Species (AIS)

We are highly experienced in controlling industrial weed problems. We thoroughly understand the requirements and application of weed control in the industrial sector.

S L F Holdings has built a team of highly skilled and experienced people that can facilitate all aspects of a project from concept to beyond completion. We are a dedicated team experienced in restoration, reclamation, and revitalization of sensitive industrial and residential areas. Our 6 years experience enables us to confidently guarantee high quality service through the

recommendation and application of a wide range of registered products with the emphasis on environmental safety and the long term effects.

We thrive to understand the application and requirement of weed control in industrial areas and thoroughly understand the requirements and application of weed control in the industrial sector. There are various industrial sites where herbicide application is required in order to control the growth of weeds and unwanted plants. The services we provide are guaranteed and provide a long term effect.

S L F Holdings support an integrated control management program balanced between chemical, mechanical and biological methods of control.

#### Industrial Weed Control:

- Paved areas
- Factories
- Farms
- Fences
- Construction sites
- Pre-emergent
- Gardens
- Railroads
- Roads
- Mines
- Sport Fields
- Supplier of Herbicides
- etc.

## Declared Weeds & Alien Invader Plants

Declared Weeds & Alien Invader Plants are divided into three categories:

**Category 1 Plants.** This is the strictest category. These plants may not occur on any land or inland water surface other than in a biological control reserve. Except for the purposes of establishing a biological control reserve, one may not plant, maintain, multiply or propagate such plants, import or sell or acquire propagating material of such plants except with the written exception of the executive officer.

**Category 2 Plants.** These are plants with a commercial application and may only be grown in demarcated areas (or biological control reserves). See the Government Gazette listed below for details relating to demarcated areas. Other provisions of category 1 apply.

**Category 3 Plants.** The regulations regarding these plants are the same as for category 1, except that plants already in existence at the time of the commencement of these regulations are exempt, unless they occur within 30 metres of a 1:50 year flood line of river, stream etc.

Service areas (national):

- Gauteng
- North West
- Mpumalanga
- Limpopo
- Free State
- KwaZulu-Natal

## Soil Poisoning/ Pre and Post Construction Pest Control Services

### Soil Poisoning/Pre and Post Construction Pest control

Termites, rodents and other pests can dent your desires of having a pest free premise. Therefore, it will be better to take the right measures at the very beginning rather than waiting for things to get out of control. This is the reason Pre-construction pest control measure can be a wise move.

### What is soil poisoning?

It can be considered as the control measure for subterranean termites. It can be a highly effective move while building a new structure. You can build your dream home quite easily, but it may

be hard to keep it protected from the presence of termites and other annoying pests. Therefore, soil poisoning can be extremely useful here, as it helps in keeping termites and other pests away from your construction. Pre construction pest control can be as great move for making your home protected from all kinds of pests.

Subterranean termites can damage your property to the level you can't even imagine. It will be a smart move to do the proper soil treatment before laying down the foundation. This will help in keeping the subterranean termites and other pests away from your structure.

### How the soil poisoning is done?

This process involves drilling the holes that are one meter apart around the foundations' parameter. After that the termiticide pumped into the soil via such drilled holes for saturating the ground. Novices can't do that effectively. Therefore, it will be better to take help of experts for the doing the work with precision.

We offer the most effective, relevant and affordable services for termite and pest control. If you are looking for Termite control construction services, then we are the perfect solution for your requirements. You will be amazed to know that the termites have the potential to destroy the whole construction. This is why; most of the buildings are treated with soil poisoning measures to stay safe from the termite effect.

Our goal is not only to eradicate the termites but also preventing the further infestation of termites by creating barriers on possible entry points of termites.

### Types of Soil Poisoning

It will be good for you to know about the types of soil poisoning mentioned underneath-  
By using Repellent Termiticide- Such kind of termiticide perform by establishing a treated area around the house that is toxic to the termites. The termites prefer avoiding the soil enriched with the repellent termiticide. It is one of the most used measures during pre-construction.

By using the non-repellant termiticide- These kinds of termiticide create confusion among termites and they become unable to identify that soil sin enriched with the termiticide. Therefore, they don't avoid the treated area and leads to the eradication of the termites.

Whether it is pre construction or the post construction pest control services we are always at your service. Our main goal is to deliver the most efficient pest control services to our wide range of clients.

### Why you should choose us?

It is literally a million dollar question. Termites are gaining in numbers quite rapidly; therefore, it is wise to take right and effective measures for their removal before it gets too late. We have the finest measures along with the ability to perform as per the requirements of our clients. Here are some of the attributes that make us different from the rest-

- Enriched with the contemporary tools and non-toxic chemicals for termites and other pests removal.
- Highly dedicated and experienced team of professionals.
- Customized solutions for the best experience.
- Work with proper safety measures and guidelines.
- Legally authorized professionals.
- Plenty years of experience has transformed our performance into perfection.

Along with that we can also serve you with different other exciting and useful services. Whether it is an industrial scenario or a home our smart measures are literally like a death sign for the termites and other irritating pests that may try to invade.

If you are about to construct a new building then you can make use of our pre-construction pest control services. There can be some people who may have missed out at the first time but, they can take advantage of our post construction services. If termites or any other pest become successful to pierce and get into your home, then it is like a

warning sign for you. They can destroy everything and along with that, they may also affect your health and hygiene.

But you have no need to worry as we are here to help you. If it's your new construction site or an already constructed home, our solution are there for your complete assistance. Our experts deliver our services to ensure the maximum casualty of termites and other pests and make your place free from their grip.

We are authorised professionals with loads of experience. Here we deliver our services with no half measures. Our experts are committed to make your space pests-free so that you may breathe easy. Termites can be a big issue especially with new construction sites, therefore it will be good to thrash them straight away rather than waiting for them to occupy.

## Termites

Termites are regarded as destructive structural pests that devour a huge amount of wood and materials used in the construction of various structures. Therefore, as soon as these are detected action must be taken. The most common termites found is the subterranean and harvester termite. A subterranean termite colony can have up to 2 million termites.

By the time termites are detected, it's probably already too late. Termite infestations are not easy to spot and they can do an incredible amount of damage to a structure.

The damage termites does can devalue a home by up to 25%! Therefore, as soon as these are detected action must be taken.

A 5-year guarantee is provided on soil poisoning and 10-year guarantee on structural termite control for both industrial and residential areas. With structural termite problems we do a FREE

SITE INSPECTION helping us to establish the best possible control method.

## Ants

Ants can be found everywhere and they can be a nuisance and controlling them requires an effective control plan. There are more than 12000 species of ants!

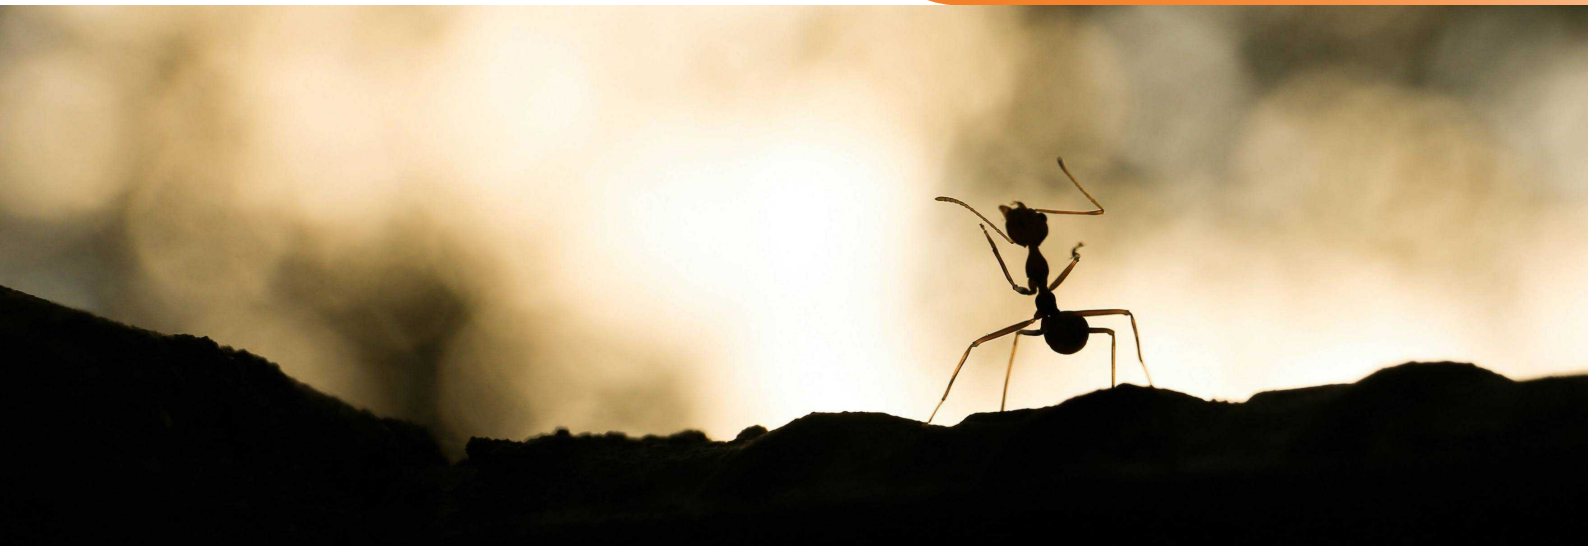

## Cockroaches

The vast majority of Cockroaches are characterized by their oval shape, foul odour, and their status as a general household pest. There are about 4500 species worldwide only 30 are considered pests, however, four especially excel at making a nuisance of themselves: the German, American, Australian and Oriental cockroaches. They will eat almost anything in their path and they are found everywhere.

## Rats

Rats have long been considered deadly and invasive pests. The center for Disease control lists nearly a dozen diseases directly linked to rats. Rats have the ability to swim up sewer pipes into toilets. Places to look for rat infestations are around pipes, behind walls and near garbage cans.
